

Semi automatic system for round containers.

EME model SO-2120

Flexible solution

Perfect labelling

Many options

Attractive price

Can be upgraded

The new solution for labelling cylindrical containers in a semi automatic proces, is designed to handle containers in different dimensions and operate with labels in many design.

The flexible design of the rollers to hold the container, allow to adjust the distance between the idle rollers, by a spindle. This makes it possible to work with a wide range of container diameters.

The modern label dispenser, model EME 2-120, has maintenance free stepper motor and microprocessor control with memory.

Specifications:

Minimum container diameter: 20mm, maximum: 100mm.

Container height: < 200mm.

Label width, minimum 20mm, maximum 100mm.

Options:

- Sensor for transparent labels.
- 200mm wide dispenser.
- Orientation function.
- Print system.
- Floor stand to hold system.

The system requires 220v and compressed air.
